Produced in Germany

by **WISSNER**[®]

All instruments are made of high-impact plastic. The bright yellow color is ideal for the use on green or white chalkboards and the black graduation can be read easily.

The handles with solid round crosscuts guarantee a high grip.

The compass has a radius-imprinting in the head, so you can set it and draw a circle in your desired diameter without using an additional ruler.

The rubber cup sucks on every flat surface, so you can use it on every chalkboard, but you can also use it on rough surfaces like wood.

The round pushing-device fixes every writing equipment in a very easy and firm way, so you can use every chalk or markers with a diameter between 6 and 18 mm (1/4" and 3/4").

All instruments are available with centimeter or inch graduation.

All instruments are also available with magnetic pieces so you can fix it on steel chalkboards.

The imprinting of your company logo is also possible.
